

**SUPPLEMENT TO THE CURRENTLY EFFECTIVE PROSPECTUSES**

---

**DWS Government & Agency Securities Portfolio**

**DWS Government Money Market Series**

**DWS Treasury Portfolio**

**DWS Government Money Market VIP**

In July 2023, changes to the federal regulations that govern money market funds were adopted. The changes will be effective at various times in 2023 and 2024. Among the changes are: (i) an increase in the minimum investment percentages in securities offering daily and weekly liquidity and (ii) the removal of the ability to temporarily suspend (gate) redemptions. The changes related to the removal of the ability to temporarily suspend (gate) redemptions are effective October 2, 2023.

Therefore, any references to the temporary gating of redemptions are hereby removed (except where such references are contained in disclosure similar to that above announcing the regulatory changes).

*Please Retain This Supplement for Future Reference*

YOUR INVESTMENT IN THE FUND IS NOT A BANK DEPOSIT AND IS NOT INSURED OR GUARANTEED BY THE FEDERAL DEPOSIT INSURANCE CORPORATION OR ANY OTHER GOVERNMENT AGENCY, ENTITY OR PERSON.

## DWS Government Money Market VIP

### INVESTMENT OBJECTIVE

The fund seeks maximum current income to the extent consistent with stability of principal.

### FEES AND EXPENSES

This table describes the fees and expenses you may pay if you buy and hold shares of the fund. This information does not reflect fees associated with the separate account that invests in the fund or any variable life insurance policy or variable annuity contract for which the fund is an investment option. These fees will increase expenses.

#### SHAREHOLDER FEES

(paid directly from your investment)	None
--------------------------------------	------

#### ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.24
Distribution/service (12b-1) fees	None
Other expenses	0.16
<b>Total annual fund operating expenses</b>	<b>0.40</b>

### EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. This example does not reflect any fees or sales charges imposed by a variable contract for which the fund is an investment option. If they were included, your costs would be higher.

Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$41	\$128	\$224	\$505

### PRINCIPAL INVESTMENT STRATEGIES

**Main investments.** The fund is a money market fund that is managed in accordance with federal regulations which govern the quality, maturity, diversity and liquidity of instruments in which a money market fund may invest.

The fund operates as a "government money market fund," as such term is defined under federal regulations. As a government money market fund, the fund is required to invest at least 99.5% of its total assets at the time of investment in cash, US government securities, and/or repurchase agreements that are collateralized by these instruments.

The fund follows policies designed to maintain a stable \$1.00 share price.

The fund primarily invests in the following types of investments:

- US Treasury bills, notes, bonds and other obligations issued or guaranteed by the US government, its agencies or instrumentalities.
- Repurchase agreements backed by these instruments. In a repurchase agreement, the fund buys securities at one price with a simultaneous agreement to sell back the securities at a future date at an agreed-upon price.

The fund may invest in floating and variable rate instruments (obligations that do not bear interest at fixed rates).

Under normal circumstances, the fund invests at least 80% of net assets, plus the amount of any borrowings for investment purposes, in US government securities and/or repurchase agreements that are collateralized by US government securities.

**Management process.** Working in consultation with portfolio management, a credit team screens potential securities and develops a list of those that the fund may

buy. Portfolio management, looking for attractive yield and weighing considerations such as credit quality, economic outlooks and possible interest rate movements, then decides which securities on this list to buy.

## MAIN RISKS

There are several risk factors that could reduce the yield you get from the fund, cause the fund's performance to trail that of other investments, or cause you to lose money.

**Money market fund risk.** You could lose money by investing in the fund. Although the fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Advisor has no legal obligation to provide financial support to the fund, and you should not expect that the Advisor will provide financial support to the fund at any time.

**Market risk.** The market value of the securities in which the fund invests may be impacted by the prospects of individual issuers, particular sectors or governments and/or general economic conditions throughout the world due to increasingly interconnected global economies and financial markets.

**Market disruption risk.** Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. The value of the fund's investments may be negatively affected by adverse changes in overall economic or market conditions, such as the level of economic activity and productivity, unemployment and labor force participation rates, inflation or deflation (and expectations for inflation or deflation), interest rates, demand and supply for particular products or resources including labor, and debt levels and credit ratings, among other factors. Such adverse conditions may contribute to an overall economic contraction across entire economies or markets, which may negatively impact the profitability of issuers operating in those economies or markets. In addition, geopolitical and other globally interconnected occurrences, including war, terrorism, economic or financial crises, uncertainty or contagion, trade disputes, government debt crises (including defaults or downgrades) or uncertainty about government debt payments, public health crises, natural disasters, climate change and related events or conditions have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Adverse market conditions or disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset

classes may be affected by adverse market conditions or a particular market disruption, the duration and effects may not be the same for all types of assets.

Russia's recent military incursions in Ukraine have led to, and may lead to, additional sanctions being levied by the United States, European Union and other countries against Russia. Russia's military incursions and the resulting sanctions could adversely affect global energy, commodities and financial markets and thus could affect the value of the fund's investments. The extent and duration of the military action, sanctions and resulting market disruptions are impossible to predict, but could be substantial.

Other market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, which at times has caused significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve including the risk of future increased rates of infection due to significant portions of the population remaining unvaccinated and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic.

Adverse market conditions or particular market disruptions, such as those caused by Russian military action and the COVID-19 pandemic, may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

**Interest rate risk.** Rising interest rates could cause the value of the fund's investments — and therefore its share price as well — to decline. A rising interest rate environment may cause investors to move out of fixed-income securities and related markets on a large scale, which could adversely affect the price and liquidity of such securities and could also result in increased redemptions from the fund. Increased redemptions from the fund may force the fund to sell investments at a time when it is not advantageous to do so, which could result in losses. Recently, there have been signs of inflationary price movements. As such, fixed-income and related markets may experience heightened levels of interest rate volatility and liquidity risk. A sharp rise in interest rates could cause the value of the fund's investments to decline and impair the fund's ability to maintain a stable \$1.00 share price. Conversely, any decline in interest rates is likely to cause the fund's yield

to decline, and during periods of unusually low or negative interest rates, the fund's yield may approach or fall below zero. A low or negative interest rate environment may prevent the fund from providing a positive yield or paying fund expenses out of current income and, at times, could impair the fund's ability to maintain a stable \$1.00 share price. Over time, the total return of a money market fund may not keep pace with inflation, which could result in a net loss of purchasing power for long-term investors. Interest rates can change in response to the supply and demand for credit, government and/or central bank monetary policy and action, inflation rates, and other factors. Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Changing interest rates may have unpredictable effects on markets, may result in heightened market volatility and potential illiquidity and may detract from fund performance to the extent the fund is exposed to such interest rates and/or volatility. Money market funds try to minimize interest rate risk by purchasing short-term securities. If there is an insufficient supply of US government securities to meet investor demand, it could result in lower yields on such securities and increase interest rate risk for the fund.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, has been phased out as of the end of 2021 for most maturities and currencies, although certain widely used US Dollar LIBOR rates are expected to continue to be published through June 2023 to assist with the transition. The transition process from LIBOR towards its expected replacement reference rate with the Secured Overnight Financing Rate (SOFR) for US Dollar LIBOR rates has become increasingly well defined, especially following the signing of the federal Adjustable Interest Rate (LIBOR) Act in March 2022, and the adoption of implementing regulations in December 2022, which will replace LIBOR-based benchmark rates in instruments with no, or insufficient, alternative rate-setting provisions with a SOFR-based rate following the cessation of LIBOR. However, the fund or the instruments in which the fund invests may be adversely affected by the transition from LIBOR to SOFR by, among other things, increased volatility or illiquidity.

**Security selection risk.** Although short-term securities are relatively stable investments, it is possible that the securities in which the fund invests will not perform as expected. This could cause the fund's returns to lag behind those of similar money market funds and could result in a decline in share price.

**Repurchase agreement risk.** If the party that sells the securities to the fund defaults on its obligation to repurchase them at the agreed-upon time and price, the fund could lose money.

**Counterparty risk.** A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or

contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

**Credit risk.** The fund's performance could be hurt and the fund's share price could fall below \$1.00 if an issuer of a debt security suffers an adverse change in financial condition that results in the issuer not making timely payments of interest or principal, a security downgrade or an inability to meet a financial obligation.

Some securities issued by US government agencies or instrumentalities are backed by the full faith and credit of the US government. Other securities that are supported only by the credit of the issuing agency or instrumentality are subject to greater credit risk than securities backed by the full faith and credit of the US government. This is because the US government might provide financial support, but has no obligation to do so, if there is a potential or actual loss of principal or failure to make interest payments.

**US Government default risk.** Due to the rising US government debt burden and potential limitations caused by the statutory debt ceiling, it is possible that the US government may not be able to meet its financial obligations or that securities issued by the US government may experience credit downgrades. In the past, US sovereign credit has experienced downgrades and there can be no guarantee that it will not experience further downgrades in the future by rating agencies. Such a credit event may adversely impact the financial markets and the fund. From time to time, uncertainty regarding the status of negotiations in the US government to increase the statutory debt ceiling and/or failure to increase the statutory debt ceiling could increase the risk that the US government may default on payments on certain US government securities, cause the credit rating of the US government to be downgraded or increase volatility in financial markets, result in higher interest rates, reduce prices of US Treasury securities and/or increase the costs of certain kinds of debt.

**Liquidity and transaction risk.** The liquidity of portfolio securities can deteriorate rapidly due to credit events affecting issuers or guarantors or due to general market conditions and a lack of willing buyers. When there are no willing buyers and an instrument cannot be readily sold at a desired time or price, the fund may have to accept a lower price or may not be able to sell the instrument at all. The potential for liquidity risk may be magnified by a rising interest rate environment or other circumstances where investor redemptions from money market funds may be higher than normal, potentially causing increased supply in the market due to selling activity. If dealer capacity in debt instruments is insufficient for market conditions, it may further inhibit liquidity and increase volatility in the debt markets. Additionally, market participants other than the fund may attempt to sell debt holdings at the same time as

the fund, which could cause downward pricing pressure and contribute to illiquidity. An inability to sell one or more portfolio securities can adversely affect the fund's ability to maintain a \$1.00 share price or prevent the fund from being able to take advantage of other investment opportunities.

Unusual market conditions, an unusually high volume of redemption requests or other similar conditions could cause the fund to be unable to pay redemption proceeds within a short period of time. If the fund is forced to sell securities at an unfavorable time and/or under unfavorable conditions, such sales may adversely affect the fund's ability to maintain a \$1.00 share price.

**Prepayment and extension risk.** When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

**Risks of holding cash.** The fund will at times hold cash positions, which may hurt the fund's performance. Cash positions may also subject the fund to additional risks and costs, including any fees imposed by the fund's custodian for large cash balances.

**Operational and technology risk.** Cyber-attacks, disruptions or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks

have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

## PAST PERFORMANCE

How a fund's returns vary from year to year can give an idea of its risk. Past performance may not indicate future results. All performance figures below assume that dividends were reinvested. The 7-day yield, which is often referred to as the "current yield," is the income generated by the fund over a seven-day period. This amount is then annualized, which means that we assume the fund generates the same income every week for a year. For more recent performance figures, go to [dws.com](https://dws.com) (the Web site does not form a part of this prospectus) or call the phone number included in this prospectus. This information does not reflect fees associated with the separate account that invests in the fund or any variable life insurance policy or variable annuity contract for which the fund is an investment option. These fees will reduce returns.

Prior to May 2, 2016, the fund operated as a prime money market fund that had the ability to invest in certain types of securities that the fund is no longer permitted to hold to any significant extent (i.e., over 0.5% of total assets). Consequently, the performance information below may have been different if the fund's current investment limitations had been in effect during the period prior to the fund's conversion to a government money market fund.

## CALENDAR YEAR TOTAL RETURNS (%) (CLASS A)

	Returns	Period ending
<b>Best Quarter</b>	0.80%	December 31, 2022
<b>Worst Quarter</b>	0.00%	March 31, 2013
<b>Year-to-Date</b>	1.00%	March 31, 2023

## AVERAGE ANNUAL TOTAL RETURNS

(For periods ended 12/31/2022 expressed as a %)

	<b>Class Inception</b>	<b>1 Year</b>	<b>5 Years</b>	<b>10 Years</b>
<b>Class A</b>	4/6/1982	1.29	0.94	0.52

Total returns would have been lower if operating expenses had not been reduced.

7-day yield as of December 31, 2022: 3.85%

## MANAGEMENT

### Investment Advisor

DWS Investment Management Americas, Inc.

## PURCHASE AND SALE OF FUND SHARES

**The fund is intended for use in a variable insurance product.** You should contact the sponsoring insurance company for information on how to purchase and sell shares of the fund.

## TAX INFORMATION

The fund normally distributes its net investment income and realized capital gains, if any, to its shareholders, the separate accounts of participating insurance companies. These distributions may not be taxable to the holders of variable annuity contracts and variable life insurance policies. For information concerning the federal income tax consequences for the holders of such contracts or policies, holders should consult the prospectus used in connection with the issuance of their particular contracts or policies.

## PAYMENTS TO FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through selected affiliated and unaffiliated brokers, dealers, participating insurance companies or other financial intermediaries, the fund, the Advisor, and/or the Advisor's affiliates, may pay the financial intermediary for the sale of fund shares and related services. These payments may create a conflict of interest by influencing the financial intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your insurance company's Web site for more information.

## Fund Details

### ADDITIONAL INFORMATION ABOUT FUND STRATEGIES AND RISKS

#### DWS Government Money Market VIP

#### INVESTMENT OBJECTIVE

The fund seeks maximum current income to the extent consistent with stability of principal.

#### PRINCIPAL INVESTMENT STRATEGIES

**Main investments.** The fund is a money market fund that is managed in accordance with federal regulations which govern the quality, maturity, diversity and liquidity of instruments in which a money market fund may invest.

The fund operates as a “government money market fund,” as such term is defined under federal regulations. As a government money market fund, the fund is required to invest at least 99.5% of its total assets at the time of investment in cash, US government securities, and/or repurchase agreements that are collateralized by these instruments.

The fund follows policies designed to seek to maintain a stable \$1.00 share price:

- Fund securities are denominated in US dollars and, at the time of purchase, have remaining maturities of 397 days (about 13 months) or less, or have certain maturity shortening features (such as interest rate resets and demand features) that have the effect of reducing their maturities to 397 days or less.
- The fund maintains a dollar-weighted average maturity of (i) 60 days or less and (ii) 120 days or less determined without regard to interest rate resets.
- The fund maintains certain minimum liquidity standards such that:
  - the fund may not purchase a security other than a security offering daily liquidity if, immediately after purchase, the fund would have invested less than 10% of its total assets in securities offering daily liquidity (includes securities that mature or are subject to demand within one business day, cash or direct US government obligations);

- the fund may not purchase a security other than a security offering weekly liquidity if, immediately after purchase, the fund would have invested less than 30% of its total assets in securities offering weekly liquidity (includes securities that mature or are subject to demand within five business days, cash, direct US government obligations and government agency discount notes with remaining maturities of 60 days or less); and
- the fund may not purchase an illiquid security if, immediately after purchase, the fund would have invested more than 5% of its total assets in illiquid securities (securities that cannot be sold or disposed of in the ordinary course of business within seven days at approximately the market value ascribed to them by the fund).

The fund primarily invests in the following types of investments:

- US Treasury bills, notes, bonds and other obligations issued or guaranteed by the US government, its agencies or instrumentalities.
- Repurchase agreements backed by these instruments. In a repurchase agreement, the fund buys securities at one price with a simultaneous agreement to sell back the securities at a future date at an agreed-upon price.

The fund may invest in floating and variable rate instruments (obligations that do not bear interest at fixed rates).

Under normal circumstances, the fund invests at least 80% of net assets, plus the amount of any borrowings for investment purposes, in US government securities and/or repurchase agreements that are collateralized by US government securities.

**Management process.** Working in consultation with portfolio management, a credit team screens potential securities and develops a list of those that the fund may buy. Portfolio management, looking for attractive yield and weighing considerations such as credit quality, economic outlooks and possible interest rate movements, then decides which securities on this list to buy.

Portfolio management may adjust the fund’s exposure to interest rate risk, typically seeking to take advantage of possible rises in interest rates and to preserve yield when interest rates appear likely to fall.

## MAIN RISKS

There are several risk factors that could reduce the yield you get from the fund, cause the fund's performance to trail that of other investments, or cause you to lose money.

**Money market fund risk.** You could lose money by investing in the fund. Although the fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Advisor has no legal obligation to provide financial support to the fund, and you should not expect that the Advisor will provide financial support to the fund at any time.

**Market risk.** The market value of the securities in which the fund invests may be impacted by the prospects of individual issuers, particular sectors or governments and/or general economic conditions throughout the world due to increasingly interconnected global economies and financial markets.

**Market disruption risk.** Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. The value of the fund's investments may be negatively affected by adverse changes in overall economic or market conditions, such as the level of economic activity and productivity, unemployment and labor force participation rates, inflation or deflation (and expectations for inflation or deflation), interest rates, demand and supply for particular products or resources including labor, and debt levels and credit ratings, among other factors. Such adverse conditions may contribute to an overall economic contraction across entire economies or markets, which may negatively impact the profitability of issuers operating in those economies or markets. In addition, geopolitical and other globally interconnected occurrences, including war, terrorism, economic or financial crises, uncertainty or contagion, trade disputes, government debt crises (including defaults or downgrades) or uncertainty about government debt payments, public health crises, natural disasters, climate change and related events or conditions have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Adverse market conditions or disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by adverse market conditions or a particular market disruption, the duration and effects may not be the same for all types of assets.

Russia's recent military incursions in Ukraine have led to, and may lead to, additional sanctions being levied by the United States, European Union and other countries against

Russia. Russia's military incursions and the resulting sanctions could adversely affect global energy, commodities and financial markets and thus could affect the value of the fund's investments. The extent and duration of the military action, sanctions and resulting market disruptions are impossible to predict, but could be substantial.

Other market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, which at times has caused significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve including the risk of future increased rates of infection due to significant portions of the population remaining unvaccinated and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic.

Adverse market conditions or particular market disruptions, such as those caused by Russian military action and the COVID-19 pandemic, may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

**Interest rate risk.** Rising interest rates could cause the value of the fund's investments — and therefore its share price as well — to decline. A rising interest rate environment may cause investors to move out of fixed-income securities and related markets on a large scale, which could adversely affect the price and liquidity of such securities and could also result in increased redemptions from the fund. Increased redemptions from the fund may force the fund to sell investments at a time when it is not advantageous to do so, which could result in losses. Recently, there have been signs of inflationary price movements. As such, fixed-income and related markets may experience heightened levels of interest rate volatility and liquidity risk. A sharp rise in interest rates could cause the value of the fund's investments to decline and impair the fund's ability to maintain a stable \$1.00 share price. Conversely, any decline in interest rates is likely to cause the fund's yield to decline, and during periods of unusually low or negative interest rates, the fund's yield may approach or fall below zero. A low or negative interest rate environment may prevent the fund from providing a positive yield or paying fund expenses out of current income and, at times, could impair the fund's ability to maintain a stable \$1.00 share

price. Over time, the total return of a money market fund may not keep pace with inflation, which could result in a net loss of purchasing power for long-term investors. Interest rates can change in response to the supply and demand for credit, government and/or central bank monetary policy and action, inflation rates, and other factors. Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Changing interest rates may have unpredictable effects on markets, may result in heightened market volatility and potential illiquidity and may detract from fund performance to the extent the fund is exposed to such interest rates and/or volatility. Money market funds try to minimize interest rate risk by purchasing short-term securities. If there is an insufficient supply of US government securities to meet investor demand, it could result in lower yields on such securities and increase interest rate risk for the fund.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, has been phased out as of the end of 2021 for most maturities and currencies, although certain widely used US Dollar LIBOR rates are expected to continue to be published through June 2023 to assist with the transition. The transition process from LIBOR towards its expected replacement reference rate with the Secured Overnight Financing Rate (SOFR) for US Dollar LIBOR rates has become increasingly well defined, especially following the signing of the federal Adjustable Interest Rate (LIBOR) Act in March 2022, and the adoption of implementing regulations in December 2022, which will replace LIBOR-based benchmark rates in instruments with no, or insufficient, alternative rate-setting provisions with a SOFR-based rate following the cessation of LIBOR. However, the fund or the instruments in which the fund invests may be adversely affected by the transition from LIBOR to SOFR by, among other things, increased volatility or illiquidity.

**Security selection risk.** Although short-term securities are relatively stable investments, it is possible that the securities in which the fund invests will not perform as expected. This could cause the fund's returns to lag behind those of similar money market funds and could result in a decline in share price.

**Repurchase agreement risk.** If the party that sells the securities to the fund defaults on its obligation to repurchase them at the agreed-upon time and price, the fund could lose money.

**Counterparty risk.** A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

**Credit risk.** The fund's performance could be hurt and the fund's share price could fall below \$1.00 if an issuer of a debt security suffers an adverse change in financial condition that results in the issuer not making timely payments of interest or principal, a security downgrade or an inability to meet a financial obligation.

Some securities issued by US government agencies or instrumentalities are backed by the full faith and credit of the US government. Other securities that are supported only by the credit of the issuing agency or instrumentality are subject to greater credit risk than securities backed by the full faith and credit of the US government. This is because the US government might provide financial support, but has no obligation to do so, if there is a potential or actual loss of principal or failure to make interest payments.

**US Government default risk.** Due to the rising US government debt burden and potential limitations caused by the statutory debt ceiling, it is possible that the US government may not be able to meet its financial obligations or that securities issued by the US government may experience credit downgrades. In the past, US sovereign credit has experienced downgrades and there can be no guarantee that it will not experience further downgrades in the future by rating agencies. Such a credit event may adversely impact the financial markets and the fund. From time to time, uncertainty regarding the status of negotiations in the US government to increase the statutory debt ceiling and/or failure to increase the statutory debt ceiling could increase the risk that the US government may default on payments on certain US government securities, cause the credit rating of the US government to be downgraded or increase volatility in financial markets, result in higher interest rates, reduce prices of US Treasury securities and/or increase the costs of certain kinds of debt.

**Liquidity and transaction risk.** The liquidity of portfolio securities can deteriorate rapidly due to credit events affecting issuers or guarantors or due to general market conditions and a lack of willing buyers. When there are no willing buyers and an instrument cannot be readily sold at a desired time or price, the fund may have to accept a lower price or may not be able to sell the instrument at all. The potential for liquidity risk may be magnified by a rising interest rate environment or other circumstances where investor redemptions from money market funds may be higher than normal, potentially causing increased supply in the market due to selling activity. If dealer capacity in debt instruments is insufficient for market conditions, it may further inhibit liquidity and increase volatility in the debt markets. Additionally, market participants other than the fund may attempt to sell debt holdings at the same time as the fund, which could cause downward pricing pressure and contribute to illiquidity. An inability to sell one or more portfolio securities can adversely affect the fund's ability

to maintain a \$1.00 share price or prevent the fund from being able to take advantage of other investment opportunities.

Unusual market conditions, an unusually high volume of redemption requests or other similar conditions could cause the fund to be unable to pay redemption proceeds within a short period of time. If the fund is forced to sell securities at an unfavorable time and/or under unfavorable conditions, such sales may adversely affect the fund's ability to maintain a \$1.00 share price.

Certain shareholders, including clients or affiliates of the Advisor, may from time to time own or control a significant percentage of the fund's shares. These shareholders may include, for example, institutional investors and other shareholders whose buy-sell decisions are controlled by a single decision maker. Redemptions by these shareholders, or a high volume of redemption requests generally, may further increase the fund's liquidity risk and may impact the fund's ability to maintain a \$1.00 share price.

**Prepayment and extension risk.** When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

**Risks of holding cash.** The fund will at times hold cash positions, which may hurt the fund's performance. Cash positions may also subject the fund to additional risks and costs, including any fees imposed by the fund's custodian for large cash balances.

**Operational and technology risk.** Cyber-attacks, disruptions or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of the fund's NAV and/or

the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

## OTHER POLICIES AND RISKS

While the previous pages describe the main points of the fund's strategy and risks, there are a few other matters to know about:

- Although major changes tend to be infrequent, the fund's Board could change the fund's investment objective without seeking shareholder approval. However, the Board will provide shareholders with at least 60 days notice prior to making any changes to the fund's 80% investment policy as described herein.
- Portfolio management measures credit quality at the time it buys securities, using independent rating agencies or, for unrated securities, its own judgment. All securities must meet the credit quality standards applied by portfolio management at the time they are purchased. If a security's credit quality changes, portfolio management will decide what to do with the security, based on its assessment of what would most benefit the fund.
- While the fund currently does not intend to impose a liquidity fee or redemption gate in connection with the implementation of federal regulations relating to money market funds, the fund may elect to do so in the future.
- From time to time, the fund may have a concentration of shareholder accounts holding a significant percentage of shares outstanding. Investment activities of these shareholders could have a material impact on the fund.
- Your fund assets may be at risk of being transferred to the appropriate state if you fail to maintain a valid address and/or if certain activity does not occur in your account within the time specified by state abandoned property law. Contact your financial representative or the transfer agent for additional information.
- Shareholders of the fund (which may include affiliated and/or non-affiliated registered investment companies that invest in the fund) may make relatively large redemptions or purchases of fund shares. These transactions may cause the fund to have to sell securities or invest additional cash, as the case may be. While it is impossible to predict the overall impact of these transactions over time, there could be adverse effects on the fund's performance to the extent that the fund may be required to sell securities or invest cash at times when it would not otherwise do so. These transactions could adversely impact the fund's liquidity, accelerate the realization of taxable income if sales of securities resulted in capital gains or other income and increase transaction costs, which may adversely affect the fund's performance. These transactions could also adversely impact

the fund's ability to implement its investment strategies and pursue its investment objective, and, as a result, a larger portion of the fund's assets may be held in cash or cash equivalents. In addition, large redemptions could significantly reduce the fund's assets, which may result in an increase in the fund's expense ratio on account of expenses being spread over a smaller asset base and/or the loss of fee breakpoints.

## For More Information

This prospectus doesn't tell you about every policy or risk of investing in the fund. If you want more information on the fund's allowable securities and investment practices and the characteristics and risks of each one, you may want to request a copy of the Statement of Additional Information.

Keep in mind that there is no assurance that the fund will achieve its objective.

A schedule of the fund's portfolio holdings, including information required by applicable regulations, is posted once each month on [dws.com](http://dws.com) (the Web site does not form a part of this prospectus). Portfolio holdings as of each month-end are posted to the Web site within five business days of the date of the applicable portfolio holdings information. More frequent posting of portfolio holdings information may be made from time to time on [dws.com](http://dws.com). The posted portfolio holdings information is available by fund and generally remains accessible for a period of not less than six months. The fund also may post on the Web site, on the same or a more frequent basis, various depictions of portfolio characteristics such as the allocation of the portfolio across various security types, market sectors and sub-sectors and maturities, liquidity and risk characteristics of the portfolio. The fund's Statement of Additional Information includes a description of the fund's policies and procedures with respect to the disclosure of the fund's portfolio holdings.

## WHO MANAGES AND OVERSEES THE FUND

### The Investment Advisor

DWS Investment Management Americas, Inc. ("DIMA" or the "Advisor"), with headquarters at 875 Third Avenue, New York, NY 10022, is the investment advisor for the fund. Under the oversight of the Board, the Advisor makes investment decisions, buys and sells securities for the fund and conducts research that leads to these purchase and sale decisions. The Advisor is an indirect, wholly-owned subsidiary of DWS Group GmbH & Co. KGaA ("DWS Group"), a separate, publicly-listed financial services firm that is an indirect, majority-owned subsidiary of Deutsche Bank AG. The Advisor and its predecessors have more than 90 years of experience managing mutual funds and provide a full range of global investment advisory services to institutional and retail clients.

DWS represents the asset management activities conducted by DWS Group or any of its subsidiaries, including DIMA, other affiliated investment advisors and DWS Distributors, Inc. (“DDI” or the “Distributor”). DWS is a global organization that offers a wide range of investing expertise and resources, including hundreds of portfolio managers and analysts and an office network that reaches the world’s major investment centers. This well-resourced global investment platform brings together a wide variety of experience and investment insight across industries, regions, asset classes and investing styles.

The Advisor may utilize the resources of its global investment platform to provide investment management services through branch offices or affiliates located outside the US. In some cases, the Advisor may also utilize its branch offices or affiliates located in the US or outside the US to perform certain services, such as trade execution, trade matching and settlement, or various administrative, back-office or other services. To the extent services are performed outside the US, such activity may be subject to both US and foreign regulation. It is possible that the jurisdiction in which the Advisor or its affiliate performs such services may impose restrictions or limitations on portfolio transactions that are different from, and in addition to, those that apply in the US.

**Management Fee.** The Advisor receives a management fee from the fund. Below is the management rate paid by the fund for the most recent fiscal year, as a percentage of the fund’s average daily net assets:

Fund Name	Fee Paid
DWS Government Money Market VIP	0.157% **

\*\*Reflects the effects of expense limitations and/or fee waivers then in effect.

The following waiver is currently in effect:  
For DWS Government Money Market VIP, the Advisor has contractually agreed through September 30, 2023 to waive its fees and/or reimburse certain operating expenses to the extent necessary to maintain the fund’s total annual operating expenses (excluding certain expenses such as extraordinary expenses, taxes, brokerage and interest expenses) at 0.51% for Class A shares. The agreement may only be terminated with the consent of the fund’s Board.

The Advisor may, from time to time, voluntarily waive a portion of its fees and/or reimburse certain operating expenses of the fund. These voluntary waivers and/or reimbursements may be terminated at any time at the option of the Advisor.

The Advisor and its affiliates may voluntarily waive a portion of their fees and/or reimburse certain expenses to the extent necessary to assist the fund in attempting to avoid a negative yield. There is no guarantee that the fund

will avoid a negative yield. These voluntary waivers and/or reimbursements may be amended or terminated at any time at the option of the Advisor. These voluntary waivers and/or reimbursements are in addition to any existing contractual expense limitations.

A discussion regarding the basis for the Board’s approval of the fund’s investment management agreement is contained in the most recent shareholder report for the annual period ended December 31 and the semi-annual period ended June 30 (see “Shareholder reports” on the back cover).

Under a separate administrative services agreement between the fund and the Advisor, the fund pays the Advisor a fee of 0.097% of the fund’s average daily net assets for providing most of the fund’s administrative services. The administrative services fee discussed above is included in the fees and expenses table under “Other expenses.”

**Multi-Manager Structure.** The Advisor, subject to the approval of the Board, has ultimate responsibility to oversee any subadvisor to the fund and to recommend the hiring, termination and replacement of subadvisors. The fund and the Advisor have received an order from the SEC that permits the Advisor to appoint or replace certain subadvisors, to manage all or a portion of the fund’s assets and enter into, amend or terminate a subadvisory agreement with certain subadvisors, in each case subject to the approval of the fund’s Board but without obtaining shareholder approval (“multi-manager structure”). The multi-manager structure applies to subadvisors that are not affiliated with the fund or the Advisor (“nonaffiliated subadvisors”), as well as subadvisors that are indirect or direct, wholly-owned subsidiaries of the Advisor or that are indirect or direct, wholly-owned subsidiaries of the same company that, indirectly or directly, wholly owns the Advisor (“wholly-owned subadvisors”). Pursuant to the SEC order, the Advisor, with the approval of the fund’s Board, has the discretion to terminate any subadvisor and allocate and reallocate the fund’s assets among any other nonaffiliated subadvisors or wholly-owned subadvisors (including terminating a nonaffiliated subadvisor and replacing it with a wholly-owned subadvisor). The fund and the Advisor are subject to the conditions imposed by the SEC order, including the condition that within 90 days of hiring a new subadvisor pursuant to the multi-manager structure, the fund will provide shareholders with an information statement containing information about the new subadvisor. The shareholders of the fund have approved the multi-manager structure described herein.

## **MANAGEMENT**

### **DWS Government Money Market VIP**

A group of investment professionals is responsible for the day-to-day management of the fund. These investment professionals have a broad range of experience managing money market funds.

## Investing in the Fund

### YOUR INVESTMENT IN THE FUND

The information in this section may affect anyone who selects the fund as an investment option in a variable annuity contract or variable life insurance policy that offers the fund. These contracts and policies are described in separate prospectuses issued by participating insurance companies. The fund assumes no responsibility for such prospectuses.

For an analysis of the fees associated with an investment in the fund or similar funds, please refer to the current and hypothetical expense calculators for Variable Insurance Products which can be found at [fundsus.dws.com/EN/resources/calculators.jsp](https://fundsus.dws.com/EN/resources/calculators.jsp) (the Web site does not form a part of this prospectus).

### POLICIES ABOUT TRANSACTIONS

The information in this prospectus applies to Class A shares of the fund. The fund offers one class of shares. Class A shares are offered at net asset value and are not subject to 12b-1 fees.

Technically, the shareholders of Deutsche DWS Variable Series II are the participating insurance companies (the “insurance companies”) that offer the fund as choices for holders of certain variable annuity contracts or variable life insurance policies (the “contract(s)”) issued or sponsored by the insurance companies. The insurance companies may pass through voting rights to the contract owners. The fund does not sell shares directly to the public. The fund sells shares only to separate accounts of insurance companies. As a contract owner, your premium payments are allocated to the fund by the insurance companies in accordance with your contract. Please see the contract prospectus that accompanies this prospectus for a detailed explanation of your contract. Depending on context in the prospectus, the terms “you” and “yours” refer to either a contract owner or to the insurance company that issues the contract. References to “buying,” “purchasing” or “holding” fund shares refer only to the insurance company, not the contract owner.

Please bear in mind that there are important differences between DWS retail funds available to any investor (a “Retail Fund”) and those that are only available through certain financial institutions, such as insurance companies. For example, Retail Funds, unlike the fund, are not sold

to insurance company separate accounts to fund investments in variable insurance contracts. In addition, the investment objective, policies and strategies of the fund, while similar to those of a Retail Fund, are not identical. Retail Funds may be smaller or larger than the fund and have different expense ratios than the fund. As a result, the performance of the fund and a Retail Fund will differ.

Should any conflict between contract owners arise that would require that a substantial amount of net assets be withdrawn from the fund, orderly portfolio management could be disrupted to the potential detriment of shareholders of the fund.

The fund currently does not foresee any disadvantages to the holders of variable annuity contracts or variable life insurance policies arising from the fact that the interests of the holders of such contracts and policies may differ. Nevertheless, the Board intends to monitor events in order to identify any material irreconcilable conflicts that may arise and to determine what action, if any, should be taken in any such event.

The fund has a verification process for new insurance company accounts to help the government fight the funding of terrorism and money laundering activities. Federal law requires all financial institutions to obtain, verify and record information that identifies each insurance company that opens an account. This means that when an insurance company opens an account, the fund will ask for its name, address and other information that will allow the fund to identify the company. This information will be verified to ensure the identity of all insurance companies opening an account.

For certain insurance companies, the fund might request additional information (for instance, the fund would ask for documents such as the insurance company’s articles of incorporation) to help the fund verify the insurance company’s identity.

The fund will not complete the purchase of any shares for an account until all information has been provided and the application has been submitted in “good order.” Once the application is determined to be in good order, the purchase(s) will be effected at the net asset value per share next calculated.

Since the fund will be investing in instruments that normally require immediate payment in Federal funds (monies credited to a bank's account with its regional Federal Reserve Bank), the fund has adopted certain procedures for the convenience of its shareholders and to ensure that the fund receives investable funds.

The fund may reject a new account application if the insurance company doesn't provide any required or requested identifying information, or for other reasons.

## BUYING AND SELLING SHARES

The **fund is open for business** each day the New York Stock Exchange is open. The fund calculates its share price every business day, as of the close of regular trading on the New York Stock Exchange (typically 4:00 p.m. Eastern time, but sometimes earlier, as in the case of scheduled half-day trading, shortened trading hours due to emergency circumstances or unscheduled suspensions of trading).

The fund continuously sells shares to each insurance company separate account, without a sales charge, at the net asset value per share next determined after a proper purchase order is placed by the insurance company. The insurance company offers contract owners units in its separate accounts which correspond to shares in a fund. Each insurance company submits purchase and redemption orders to a fund based on allocation instructions for premium payments, transfer instructions and surrender or partial withdrawal requests for contract owners, as set forth in the accompanying prospectus for the contracts. These orders reflect the amount of premium payments to be invested, surrender and transfer requests, and other matters. Redemption orders are effected at the next net asset value per share determined after a proper redemption order is placed by the insurance company. Contract owners should look at their contract prospectuses for redemption procedures and fees.

## IMPORTANT INFORMATION ABOUT BUYING AND SELLING SHARES

- After receiving a contract owner's order, the insurance company buys or sells shares at the net asset value next calculated on any day the fund is open for business. A temporary intraday suspension or disruption of regular trading on the New York Stock Exchange will not be treated as the close of regular trading for that day if trading resumes and therefore will not impact the time at which the fund calculates its share price on that day. In the event of an early close of regular trading on the

New York Stock Exchange, such as in the case of scheduled half-day trading, shortened trading hours due to emergency circumstances or unscheduled suspensions of trading, the fund will calculate its share price as of the early close on that day. In such event, an order received before the early close will generally be effected at the share price calculated that day and an order received after the early close will generally be effected at the share price calculated on the next business day.

- Unless otherwise instructed, the fund normally makes payment of the proceeds from the sale of shares the next business day but always within seven calendar days.
- Redemptions will generally be in the form of cash, though the fund reserves the right to redeem in kind as described below. The fund typically expects to satisfy redemption requests by using available cash or by selling portfolio securities if available cash is not sufficient to meet redemptions. The fund may utilize an existing line of credit for temporary coverage in the event of a cash shortfall. The fund may also utilize interfund lending, though such use is expected to be rare. The fund may use any of these methods of satisfying redemption requests under normal or stressed market conditions. During periods of distressed market conditions, when a significant portion of the fund's portfolio may be comprised of less-liquid investments, the fund may be more likely to pay redemption proceeds by giving you securities.
- The fund does not issue share certificates.
- The fund reserves the right to reject purchases of shares for any reason.
- The fund reserves the right to withdraw or suspend the offering of shares at any time.
- The fund reserves the right to reject purchases of shares or to suspend or postpone redemptions at times when the New York Stock Exchange is closed (other than customary closings), trading is restricted or when an emergency exists that prevents a fund from disposing of its portfolio securities or pricing its shares.
- The fund may refuse, cancel or rescind any purchase order; freeze any account (meaning the insurance company will not be able to purchase shares in its account); suspend account services; and/or involuntarily redeem the account if we think that the account is being used for fraudulent or illegal purposes by the insurance company; one or more of these actions will be taken when, at the sole discretion of the fund, they are deemed to be in the fund's best interests or when the fund is requested or compelled to do so by governmental authority or by applicable law.

- The fund may close and liquidate an account if the fund is unable to verify provided information, or for other reasons; if the fund decides to close the account, the shares will be redeemed at the net asset value per share next calculated after we determine to close the account; the insurance company may be subject to gain or loss on the redemption of the fund shares and may incur tax liability.
- The fund may pay for shares sold by “redeeming in kind,” that is, by distributing to you marketable securities (which typically will involve brokerage costs for you to liquidate) rather than cash, but which will be taxable to the same extent as a redemption for cash; the fund generally won’t make a redemption in kind unless your requests over a 90-day period total more than \$250,000 or 1% of the value of the fund’s net assets, whichever is less.
- A purchase order from an insurance company separate account may not be accepted if the sale of fund shares has been suspended or if it is determined that the purchase would be detrimental to the interests of the fund.
- Neither DWS nor the fund will be responsible for any losses resulting from fraud if we reasonably believe that any order or instruction was made by an individual authorized to act on the account. We will consider all transactions to be properly processed if discrepancies are not reported promptly.

**Short-Term Trading.** Since the fund holds short-term instruments and is intended to provide liquidity to shareholders, the Advisor does not monitor or limit short-term and excessive trading activity in the fund and, accordingly, the Board has not approved any policies and procedures designed to limit this activity. However, the fund reserves the right to and may reject or cancel a purchase or exchange order into a money market fund for any reason, including if, in the opinion of the Advisor, there appears to be a pattern of short-term and excessive trading by an investor in other DWS funds.

## HOW TO RECEIVE ACCOUNT INFORMATION

If you are a contract owner, you should contact your insurance company or the organization that provides record keeping services for information about your account.

Please see the contract prospectus that accompanies this prospectus for the customer service phone number.

## HOW TO SELECT SHARES

Shares in the fund are available in connection with certain variable annuity and life insurance arrangements. Each insurance company has different provisions about how and when their contract owners may select fund shares. Each insurance company is responsible for communicating its contract owners’ instructions to the fund. Contract owners should contact their insurance company to effect transactions in connection with the fund.

## FINANCIAL INTERMEDIARY SUPPORT PAYMENTS

The Advisor, the Distributor and/or their affiliates may pay additional compensation, out of their own assets and not as an additional charge to the fund, to selected affiliated and unaffiliated brokers, dealers, participating insurance companies or other financial intermediaries (“financial representatives”) in connection with the sale and/or distribution of fund shares or the retention and/or servicing of fund investors and fund shares (“revenue sharing”). Such revenue sharing payments are in addition to any distribution or service fees payable under any Rule 12b-1 or service plan of the fund, any recordkeeping/sub-transfer agency/networking fees payable by the fund (generally through the Distributor or an affiliate) and/or the Distributor or Advisor to certain financial representatives for performing such services and any sales charges, commissions, non-cash compensation arrangements expressly permitted under applicable rules of the Financial Industry Regulatory Authority or other concessions described in the fee table or elsewhere in this prospectus or the Statement of Additional Information as payable to all financial representatives. For example, the Advisor, the Distributor and/or their affiliates may, using their legitimate profits, compensate financial representatives for providing the fund with “shelf space” or access to a third party platform or fund offering list or other marketing programs, including, without limitation, inclusion of the fund on preferred or recommended sales lists, mutual fund “super-market” platforms and other formal sales programs; granting the Distributor access to the financial representative’s sales force; granting the Distributor access to the financial representative’s conferences and meetings; assistance in training and educating the financial representative’s personnel; and obtaining other forms of marketing support. In addition, revenue sharing payments may consist of the Distributor’s and/or its affiliates’ payment or reimbursement of ticket charges that would otherwise be assessed by a financial representative on an investor’s fund transactions.

The level of revenue sharing payments made to financial representatives may be a fixed fee or based upon one or more of the following factors: gross sales, current assets and/or number of accounts of the fund attributable to the financial representative, the particular fund or fund type or other measures as agreed to by the Advisor, the Distributor and/or their affiliates and the financial representatives or any combination thereof. The amount of these payments is determined at the discretion of the Advisor, the Distributor and/or their affiliates from time to time, may be substantial, and may be different for different financial representatives based on, for example, the nature of the services provided by the financial representative.

The Advisor, the Distributor and/or their affiliates currently make revenue sharing payments from their own assets in connection with the sale and/or distribution of DWS

fund shares or the retention and/or servicing of investors to financial representatives in amounts that generally range from 0.01% up to 0.52% of assets of the fund serviced and maintained by the financial representative, 0.05% to 0.25% of sales of the fund attributable to the financial representative, a flat fee of up to \$95,000, or any combination thereof. These amounts are annual figures typically paid on a quarterly basis and are subject to change at the discretion of the Advisor, the Distributor and/or their affiliates. Receipt of, or the prospect of receiving, this additional compensation may influence your financial representative's recommendation of the fund or of any particular share class of the fund. You should review your financial representative's compensation disclosure and/or talk to your financial representative to obtain more information on how this compensation may have influenced your financial representative's recommendation of the fund. Additional information regarding these revenue sharing payments is included in the fund's Statement of Additional Information, which is available to you on request at no charge (see the back cover of this prospectus for more information on how to request a copy of the Statement of Additional Information).

The Advisor, the Distributor and/or their affiliates may also make such revenue sharing payments to financial representatives under the terms discussed above in connection with the distribution of both DWS funds and non-DWS funds by financial representatives to retirement plans that obtain recordkeeping services from ADP, Inc. or to 403(b) plans that obtain recordkeeping services from Ascensus, Inc. on the DWS-branded retirement plan platform (the "Platform"). The level of revenue sharing payments is based upon sales of both the DWS funds and the non-DWS funds by the financial representative on the Platform or current assets of both the DWS funds and the non-DWS funds serviced and maintained by the financial representative on the Platform.

It is likely that broker-dealers that execute portfolio transactions for the fund will include firms that also sell shares of the DWS funds to their customers. However, the Advisor will not consider sales of DWS fund shares as a factor in the selection of broker-dealers to execute portfolio transactions for the DWS funds. Accordingly, the Advisor has implemented policies and procedures reasonably designed to prevent its traders from considering sales of DWS fund shares as a factor in the selection of broker-dealers to execute portfolio transactions for the fund. In addition, the Advisor, the Distributor and/or their affiliates will not use fund brokerage to pay for their obligation to provide additional compensation to financial representatives as described above.

## HOW THE FUND CALCULATES SHARE PRICE

To calculate net asset value per share, or NAV, the fund uses the following equation:

$$\left( \frac{\text{Total Assets} - \text{Total Liabilities}}{\text{Total Number of Shares Outstanding}} \right) = \text{NAV}$$

The price at which you buy and sell shares for the fund is the NAV. To obtain the fund's most recent share price, go to [dws.com](http://dws.com) (we have included our Web site address as an inactive textual reference and do not intend it to be an active link to our Web site; the Web site does not form a part of this prospectus) or call the telephone number included in this prospectus.

In valuing securities, we typically use amortized cost to account for any premiums or discounts above or below the face value of any securities the fund buys, and round the per share NAV to the nearest whole cent. The fund seeks to maintain a stable \$1.00 share price.

## DISTRIBUTIONS

The fund intends to declare its net investment income as a dividend daily and distribute dividends monthly. The fund may make additional distributions if necessary.

All distributions will be reinvested in shares of a fund unless we are informed by an insurance company that they should be paid out in cash. Any unpaid dividends will be received when the insurance company redeems its entire account, unless the insurance company elects to receive unpaid dividends on the next monthly dividend payment date. The insurance companies will be informed about the amount and character of distributions from the fund for federal income tax purposes.

## TAXES

The fund intends to qualify each year as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"), and intends to meet all requirements necessary to avoid paying any federal income or excise taxes.

Generally, owners of variable annuity and variable life contracts are not subject to current federal income taxation on income or gains realized with respect to such contracts. However, some distributions from such contracts, whether made prior to or during the annuity payment period, may be taxable at ordinary income tax rates. In addition, distributions made to an owner who is younger than 59½ may be subject to a 10% penalty tax. For further information concerning federal income tax consequences for the holders of variable annuity contracts and variable life insurance policies, such holders should consult the prospectus used in connection with the issuance of their particular contracts or policies.

In order for investors to receive the favorable federal income tax treatment available to holders of variable annuity and variable life contracts, the separate accounts

underlying such contracts, as well as the funds in which such accounts invest, must meet certain diversification requirements. The fund intends to diversify its assets such that a separate account investing in the fund will comply with these requirements with respect to the amounts invested in a fund. If a fund or separate account does not meet such requirements or if a fund were to fail to qualify as a regulated investment company for any taxable year and could not or did not cure such failure, income allocable to the contracts associated with the separate account may be taxable currently for federal income tax purposes to the holders of such contracts and income from prior periods with respect to such contracts also could be taxable, most likely in the year of the failure. In addition, if a fund were to fail to qualify and be eligible for treatment as a regulated investment company for any taxable year and could not or did not cure such failure, the fund would be subject to tax on its taxable income at corporate rates.

Under Treasury regulations, insurance companies holding the separate accounts may have to report to the IRS losses above a certain amount resulting from a sale or disposition of a fund's shares.

The discussion above is generally based on the assumption that shares of a fund will be respected as owned by insurance company separate accounts. If this is not the case (for example, because the IRS finds an impermissible level of "investor control" over the investment options underlying variable contracts), the advantageous federal income tax treatment provided in respect of insurance company separate accounts under the Code will no longer be available. In that situation, the person or persons determined to own the fund shares will be currently taxed for federal income tax purposes on fund distributions, and on the proceeds of any redemption of fund shares.

Participating insurance companies should consult their own tax advisors as to whether distributions from a fund are subject to federal income tax if they are retained as part of policy reserves.

Fund investments in securities of foreign issuers may be subject to withholding and other taxes at the source, including on dividend or interest payments, which will reduce a fund's return on such securities.

The fund's investments in certain debt obligations may cause the fund to recognize taxable income in excess of the cash generated by such investments. Thus, the fund could be required at times to liquidate other investments in order to satisfy its distribution requirements.

The preceding is a brief summary of certain of the relevant federal income tax considerations. Because each shareholder's and contract holder's tax situation is unique, ask your tax professional about the tax consequences of your investments, including possible federal, foreign, state or local taxes.

## Financial Highlights

The financial highlights are designed to help you understand recent financial performance. The figures in the first part of the table are for a single share. The total return figures represent the percentage that an investor in the fund would have earned (or lost), assuming all dividends and distributions were reinvested. This information has been audited by Ernst & Young LLP, independent registered public accounting firm, whose report, along with the

fund's financial statements, is included in the fund's annual report (see "Shareholder reports" on the back cover). This information does not reflect charges and fees associated with the separate account that invests in the fund or any variable life insurance policy or variable annuity contract for which the fund is an investment option. These charges and fees will reduce returns.

### DWS Government Money Market VIP — Class A

	2022	Years Ended December 31,			
		2021	2020	2019	2018
<b>Selected Per Share Data</b>					
<b>Net asset value, beginning of period</b>	<b>1.00</b>	<b>1.00</b>	<b>1.00</b>	<b>1.00</b>	<b>1.00</b>
<i>Income (loss) from investment operations:</i>					
Net investment income	.013	.000*	.002	.018	.014
Net realized gain (loss)	(.000)*	(.000)*	.000*	.000*	(.000)*
<b>Total from investment operations</b>	<b>.013</b>	<b>.000*</b>	<b>.002</b>	<b>.018</b>	<b>.014</b>
<i>Less distributions from:</i>					
Net investment income	(.013)	(.000)*	(.002)	(.018)	(.014)
<b>Net asset value, end of period</b>	<b>1.00</b>	<b>1.00</b>	<b>1.00</b>	<b>1.00</b>	<b>1.00</b>
Total Return (%) <sup>a</sup>	1.29	.01	.24	1.77	1.39
<b>Ratios to Average Net Assets and Supplemental Data</b>					
Net assets, end of period (\$ millions)	187	197	153	122	107
Ratio of expenses before expense reductions (%) <sup>b</sup>	.40	.42	.42	.47	.50
Ratio of expenses after expense reductions (%) <sup>b</sup>	.32	.06	.23	.47	.50
Ratio of net investment income (%)	1.25	.01	.20	1.74	1.37

a Total return would have been lower had certain expenses not been reduced.

b Expense ratio does not reflect charges and fees associated with the separate account that invests in the Fund or any variable life insurance policy or variable annuity contract for which the Fund is an investment option.

\* Amount is less than \$.0005.

## Appendix

### HYPOTHETICAL EXPENSE SUMMARY

Using the annual fund operating expense ratios presented in the fee tables in the fund's prospectus, the Hypothetical Expense Summary shows the estimated fees and expenses, in actual dollars, that would be charged on a hypothetical investment of \$10,000 in the fund held for the next 10 years and the impact of such fees and expenses on fund returns for each year and cumulatively, assuming a 5% return for each year. The historical rate of return for the fund may be higher or lower than 5% and, for money market funds, is typically less than 5%. The tables also assume that all dividends and distributions are reinvested. The annual fund expense ratios shown are net of any contractual fee waivers or expense reimbursements, if

any, for the period of the contractual commitment. Also, please note that if you are investing through a third party provider, that provider may have fees and expenses separate from those of the fund that are not reflected here. Mutual fund fees and expenses fluctuate over time and actual expenses may be higher or lower than those shown.

The Hypothetical Expense Summary should not be used or construed as an offer to sell, a solicitation of an offer to buy or a recommendation or endorsement of any specific mutual fund. You should carefully review the fund's prospectus to consider the investment objective, risks, expenses and charges of the fund prior to investing.
